Forecast for Tuesday 16 Nov 2021

Weather: Rain will set in across Lochaber through morning, turning heavy by mid morning then spreading eastwards to Loch Lomond and the Trossachs by midday. This will be brought in on southwesterly gales, these possibly reaching storm force above munro level. Rain will turn to sleet and snow above around 800m before clearing to leave clear spells and passing sharp showers, these wintry above 500m or so. Feeling bitterly cold through evening as gales persist.

Chance of cloud free mountain/hill tops above 800m: 10%, improving 40% from late afternoon.

Visibility: Widely limited to a kilometer or less above the cloud base which will sit around 600m initially, lowering towards 400m at times. Heavy rain will obscure neighbouring slopes across lower ground too. Best shelter across Easter Ross. Sleet and snow will limit visibility even further, perhaps down to a hundred metres or so. Cloud will briefly break from late afternoon as rain clears ahead of showers developing.

Met Office Aberdeen Meteorologist's View

Gusts reaching 70mph on the most exposed ground around midday making any progress very difficult. Note falling temperatures from late afternoon as colder air sets in. The odd rumble of thunder is possible through evening.

Forecast for Wednesday 17 Nov 2021

Weather: A cold, autumnal feel to the day as westerly gales persist and bring passing showers, these wintry above around 600m initially, slowly rising to munro level. Some sunny breaks between these showers although there will be plenty of hill fog. Showers tending to fade into the evening ahead of milder air and rain arriving late evening.

Maximum wind: West 30-35mph gusting 45mph, slowing easing to 20-25mph gusting 35mph through evening.

Chance of cloud free mountain/hill tops above 800m: 40%, but no chance after dark.

Visibility: Cloud will be a semi permanent feature above around 700m, perhaps lower along the west coast but some breaks are also expected. Cloud descending and thickening widely after dark.

Temperature: **Glens:** Plus 6 Celsius rising to 9 or 10 Celsius..
At 800m: Around freezing.
Freezing level: 600m rising to 1200m by midday then well above summits by midnight.
